

Action Plan

Phase 1: Data Preparation

Collect and load dataset

Check for missing values

Clean and preprocess data

Phase 2: Data Analysis

Perform EDA

Identify sales trends

Visualize important features

Phase 3: Feature Engineering

Create derived features

Encode categorical variables

Scale numerical value

Phase 4: Model Development

Split training and testing data

Train Linear Regression, Decision Tree, Random Forest models

Compare results

Phase 5: Model Evaluation

Calculate MAE and RMSE

Select best-performing model

Phase 6: Final Report Preparation

Compile findings

Add graphs and outputs

Prepare documentation
